

Vortex Hose Reel

The first dual position "vortex" hose reel for all small to large marinas.

The SaniSailor Vortex Hose Reel

Vortex Hose Reel allows the user to pull off or unwind only the amount of hose needed to perform a pump out.

When the hose reel is flipped to the pumping position or horizontal the vacuum increases to maximum almost instantly.

FASTER, LESS LABOR

Perform pumpouts much faster since you don't have to unwind and rewind "30, 50, 100 feet" of hose when you only need a shorter length.

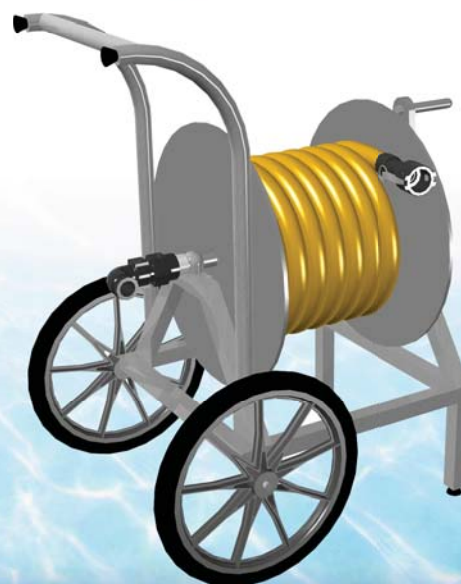

LESS MAINTENANCE

Increase pump life and lower maintenance intervals since you generate vacuum much faster, decrease pump dry run time and total vertical lift.

LESS WEAR AND TEAR

Protect from unnecessary replacement of suction hoses due to abrasion from being dragged around on rough dock surfaces.

Stainless Steel

PVC/Aluminum
